

Cyrillic fonts to match Times/Helvetica/Curier

The [TeX Gyre](#) project provides extensions to the URW standard Postscript fonts. Cyrillic extensions by Valek Filippov were part of TeXGyre but removed due to license incompatibility.

These fonts are still available in the [scalable-cyrfonts-tex](#) Debian package but not on CTAN. Furthermore, both [Fourier New Century](#) and *Free New Century* use the TeX-name *fnc*. Therefore *scalable-cyrfonts-tex* conflicts with the Debian [texlive-fonts-extra](#) package.

The Cyrillic fonts from the [paratype](#) package are not exact matches but fit quite well if they are downscaled a bit. As the Paratype package includes also T1 encoded fonts, Paratype fonts can be used for both Latin and Cyrillic text.

Other vector fonts supporting Cyrillic include [Deja Vu](#), [Droid](#), [Gentium](#), and [Linux Libertine](#).

Тест шрифтов

Normal: Hello world! Здравствуй, мир!

it: *Hello world! Здравствуй, мир!*

sl: *Hello world! Здравствуй, мир!*¹

bf: **Hello world! Здравствуй, мир!**

bf it: ***Hello world! Здравствуй, мир!***

sc: not available in Paratype

bf sc: missing

sf: Hello world! Здравствуй, мир!

sf bf: **Hello world! Здравствуй, мир!**

sf sl: *Hello world! Здравствуй, мир!*

sf sc: not available in Paratype

tt: Hello world! Здравствуй, мир!
